COMPANY PROFILE

“Matta and the team performed beyond our expectations. They are a pleasure to work with, and stand out as true security experts in their field.”
John McClelland - EuroNext LIFFE

Matta are a security consultancy who have been helping customers secure their business, data and operations since 2001. Our experience shows in the level of knowledge and expertise we can bring to each project. We use only senior qualified consultants with established track records, and have been background checked for your peace of mind.

GLOBAL SERVICES

Matta works extensively in UK, Europe, the Middle East, and North America. Our clients can be small or large, but all get the same high standard of service and quality of reporting.

PROFESSIONAL CONSULTANTS

All our Penetration Testing is carried out by senior consultants, accredited to Tigerscheme Senior Level. Our methodology encompasses a structured approach that yields consistent results. Ethical considerations, embodied by Tigerscheme, are applied as part of the company culture which takes the care of your sensitive data seriously.

SUCCESSFUL PROJECTS

Before we start a project, we work with you to determine the KPIs of our delivery. Understanding the success criteria before we start a project is a critical step in our process, and a factor that separates Matta from many other security firms.

TIGERScheme

SERVICES

Matta offers a wide range of technical services. If you are looking for technical assessments, bespoke consultancy, or architecture reviews, Matta can offer the highest levels of service.

Work with us to find out why some of the most respected Blue Chip International companies have chosen Matta for long-term partnerships.

NETWORK PENETRATION TESTING

Our network security assessment services are run under an OSSTM methodology in accordance with proven Tigerscheme technical and ethical approaches.

INTERNET-BASED ASSESSMENT

Public-facing systems are especially susceptible, not only to targeted attack, but also from mass internet-based automated attacks, which constantly probe systems for vulnerabilities and weaknesses.

Consultants from Matta will ensure that your public-facing systems are robust and secure against a wide spectrum of different attack vectors.

INTERNAL ASSESSMENT

Unfortunately, many companies have experienced some security breach internally. Sometimes this involves an employee accessing data they are not authorised to, or a contractor or third party compromising security.

Matta consultants will come on site and run through a methodical series of tests representing the attack vectors identified as a concern.

WEB APPLICATION TESTING

Matta has extensive experience with web application security, ranging from architecture design through to code reviews and external post production assessment.

Our consultants have a background in academic programming and professional development as well as security.

DATABASE TESTING

A company's information assets are often held in databases, and make tempting targets for hackers. Insufficiently securing those databases is a mistake you can't afford to make.

"I'd like to just say how impressed by your representative we were. He was very knowledgeable about wireless and network security and filled us with confidence. We were also pleased that when he'd done all he could on the wireless, he actively sought out other ways to improve the security of our wired network."
Hayden Wells, St Clements Insurance.

OTHER SERVICES WE OFFER:

- ◆ Incident Response, Forensic Response
- ◆ Server Hardening
- ◆ Secure Architecture Review/Design
- ◆ Automated Vulnerability Assessments
- ◆ PCI DSS, CoCo, and Compliance work
- ◆ Tigerscheme Training

COMPLIANCE

OPPORTUNITY FOR BEST PRACTICE

Companies can use unavoidable compliance requirements as a way to achieve organisational goals, and kill two birds with one stone.

Matta believes that the PCI and Code of Connection standards in particular present an opportunity to leverage the considerable amount of work governing bodies have already completed to help you apply best practices in your own organisation.

Achieving compliance is one process, and maintaining it afterwards is another. Matta can help you whatever stage you are at. Matta is accredited by PCI to conduct security tests in line with the compliance requirements. We can also supply QSA auditors if required.

BUSINESS FOCUSED

Unfortunately Matta has seen many projects encounter significant problems and unexpected high costs because no security input was taken at the design stage of a project.

In one project it was found that 3 days of consultancy early on in the project would have saved 3 months of additional programming to correct some architecture issues later.

Our business-led approach can provide an advantage to your compliance projects. Make use of our experience by engaging with us early in the project's lifecycle, and reap the dividends of a properly prepared security plan.

Maecenas cursus, eros eget iaculis bibendum, sapien diam bibendum ligula, quis gravida nunc sem ac elit.

COMPLIANCE SERVICES

Matta has a broad range of skills which can be applied to PCI or Code of Connection projects:

- ◆ Secure Architecture Review
- ◆ Automated Vulnerability Assessment
- ◆ Penetration Testing
- ◆ Code Review
- ◆ Database Audits
- ◆ IT Health Checks

WHY YOU SHOULD WORK WITH US

Matta has a wealth of experience you can draw upon for your requirements. Our breadth of technical knowledge, combined with experience in running compliance projects, will give you confidence in a successful outcome for your project.

Work with us to discover why Matta is a preferred choice for retailers, e-commerce companies, and Local Authorities for their compliance-driven requirements.
